

OKEKE OBINNA

COMPUTER ENGINEER — AI / FULL-STACK

obinnaokeke15@yahoo.com | +2347040896864 | Lagos, Nigeria | www.linkedin.com/in/obinna-okeke-48b6632b7

PROFESSIONAL SUMMARY

Innovative and results-driven Computer Engineer (First-Class Honours) with proven expertise bridging Full-Stack Web Development, Artificial Intelligence, and Cybersecurity. Track record of architecting scalable web applications, deploying high-accuracy deep learning models, and engineering secure network analysis tools. Adept at transforming complex backend logic into intuitive user experiences. Seeking to leverage strong foundational knowledge and advanced project experience to drive impact in a dynamic CyberSecurity, Computer Engineering, Software Engineering, AI/ML, or Security role.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C++, SQL, HTML5/CSS3, Java, C

Frontend & Web: React.js, Vite, Streamlit

Backend & Databases: Node.js, Express.js, FastAPI, SQLite, RESTful API Architecture

AI, ML & Data: PyTorch (DistilBERT, BiLSTM), LLM Integration, Prompt Engineering, Data Parsing

Security & DevOps: CI/CD Pipelines, Network Traffic Analysis (Scapy, PCAP), Cisco Packet Tracer, Git, Paystack API

EDUCATION

Caleb University, Imota, Lagos

August 2026

B.Sc. Computer Science - First Class Honours

WORK EXPERIENCE

CVhub4Africa - IT Student / Tech Instructor

May 2025 – October 2025

- Facilitated hands-on technical instruction in foundational programming, hardware diagnostics, and networking protocols, elevating the overall technical proficiency of student cohorts
- Managed and optimized lab computing infrastructure, ensuring maximum hardware and software uptime to support uninterrupted, high-performance learning environments
- Conducted rigorous code reviews, debugged complex student assignments, and enforced modern software engineering best practices.

PROJECTS

Guardian AI v4.1 - Hybrid Phishing Detection System | Python, PyTorch, Streamlit

- Engineered a hybrid DistilBERT + BiLSTM deep learning architecture achieving 98.97% classification accuracy and a 0.9993 ROC-AUC score on a 46,744-email dataset.
- Deployed a real-time Streamlit monitoring dashboard enabling interactive email feature inspection and threat probability scoring.

Lucid - AI-Powered Information Diet Aggregator

- Architected a full-stack content aggregation platform using FastAPI and React/Vite to summarize high-volume document feeds.
- Integrated the Claude API for automated, low-latency summarization workflows, improving content parsing efficiency.
- Used an AI coding agent to accelerate feature prototyping and enforce modular code design.

EthicAI - Algorithmic Bias Audit & Decision Support System | Python, Streamlit, Data Analytics

- Developed a Streamlit application evaluating loan approval and HR decision systems for demographic parity and algorithmic bias.
- Integrated explainability metrics and fairness audit tools to quantify model decision distributions across user cohorts.

Pulse - Anonymous Student Feedback Platform | FastAPI, React, Vite

- Designed an anonymous, real-time feedback system using FastAPI and React/Vite for instant, lecture-level student feedback.
- Structured secure, low-latency API routes maintaining non-trackable submission channels to protect user anonymity.

AeroGuard-CI - Flight Telemetry CI/CD Pipeline | Python, CI/CD, Streamlit

- Constructed a Python-based CI execution pipeline for flight telemetry data with automated chaos/fault injection testing.
- Built a Streamlit monitoring dashboard visualizing build failure states and system resilience metrics.

Hostel Student Marketplace - Full-Stack E-Commerce & Auction Platform | *Node.js, Express, React, SQLite*

- Engineered a full-stack campus marketplace using Node.js, Express, React (Vite), and SQLite.
- Integrated the Paystack API for payment processing and built custom anti-snipe bidding logic for fair auction time extensions

NetGuard-SOC - Automated PCAP Packet Analyzer & Threat Detector | *Python, Scapy, Streamlit*

- Engineered a lightweight network packet analyzer using Python and Scapy to inspect live `.pcap` traffic for malicious signatures and port scan attempts.
- Implemented real-time anomaly detection logic flagging suspicious packet bursts and ARP spoofing events with automated threat severity scoring.
- Deployed an interactive Streamlit dashboard visualizing network flow distributions, active connection nodes, and flagged threat audit logs.

CERTIFICATIONS

- **Cybersecurity & Networking:** Cisco Networking Academy (Introduction to Cybersecurity), IBM SkillsBuild (Cybersecurity Fundamentals), CompTIA (Networking, Security & Maintenance)
- **Cloud & Software Development:** CompTIA (Cloud Computing Fundamentals), CompTIA (Databases & Software Development), IBM SkillsBuild (Web Development Fundamentals)
- **IT Foundations & Ethics:** CompTIA IT Fundamentals (Core, Computer Basics, Setting Up Computers), CompTIA (Mastery of IT Ethics), Microsoft 365 Introduction
